watchcafe.eu

How accurate is your watch, really?

Free browser tools to measure and track your mechanical watches. No app, no account, no timegrapher needed. Just your phone and a few minutes a day.

Seconds per day, fast or slow. Compare your watch with an exact reference clock for a few days and see its rate, with charts and a margin of error.

THE TOOLS

Rate Meter

How many seconds a day does it gain or lose? Per position, and compared with COSC and other standards.

Power Reserve

How long does it run on a full wind? Read the stop time straight off the hands.

Collection

All your watches in one place: details, service log, what you wore today and a printable report.

Moon Phase

Set your moonphase complication right: how many presses, with the real new and full moons.

HOW IT WORKS

1 Open watchcafe.eu

On your phone or laptop. Nothing to install, nothing to sign up for.

2 Match your watch

Set the on-screen clock to what your watch shows and tap Record.

3 Repeat, then read

Again over a few days. The Rate Meter works out the rate.
